Mohammad Sadegh Majidi Kadkani

Senior Backend Engineer | Fintech

Mashhad, Iran — open to Tehran / Hybrid | +98 901 248 6495 | sadeghmajidi980@gmail.com | github.com/Cmatrix1

SUMMARY

Senior Python backend engineer with 6+ years of experience designing, building and scaling secure, high-traffic systems with FastAPI, Django, PostgreSQL, Redis, Celery and Docker. Track record across fintech (digital-gold trading for 250K+ users, payments, portfolio analytics, fractional real-estate investment), SaaS and marketplaces (vacation rentals, one of Iran's largest HTML template stores, a 100K+ user VPN subscription platform, a TOEFL practice platform) and open source. Strong in system design, Clean Architecture/DDD, money-safe payment flows, zero-downtime migrations, testing and CI/CD; comfortable owning products end to end and collaborating with frontend and product teams.

EXPERIENCE

Senior Backend Engineer | Zarafza (Amin Etemad)

May 2026 – Present

Digital-gold trading fintech • zarafza.com • FastAPI, PostgreSQL, Redis, Celery

- **Led the V2 rewrite** of a live digital-gold trading backend serving 250K+ users, consolidating 3 legacy services into one modular FastAPI monolith (Strangler Fig) and retiring them endpoint by endpoint.
- **Delivered a zero-downtime migration** across 5 production PostgreSQL databases using schema ownership rules, outbox-backed dual-writes and a staged API-gateway cutover, with no service disruption for users.
- **Made payments money-safe:** every SEP/Jibit callback is re-verified before crediting, failed credits retry idempotently via a transactional outbox, and Redis distributed locks prevent double-spend in trades and withdrawals.
- **Raised security and reliability** with ES512 JWT, OTP/2FA on withdrawals, RBAC and rate limiting, plus Prometheus metrics, health checks and automatic alerts on server errors (Docker, GitLab CI, Celery).
- **Guaranteed legacy parity** with an automated integration testing framework of 300+ test cases, while shipping production features alongside frontend and product teams.

Backend Engineer (Contract, part-time) | Namagar

Apr 2026 – Jun 2026

AI-powered investment portfolio platform for gold, forex, crypto, stocks and funds

- Built the platform's backend from scratch, enabling investors to track and analyze gold, forex, crypto, stock and fund portfolios in one place.
- Delivered portfolio valuation, ROI and profit/loss analysis, historical performance and scenario simulation as a production-ready financial analytics product.
- Improved responsiveness and scalability through background task orchestration and caching.

Backend Engineer | Villaroo

Dec 2025 – Apr 2026

Modern vacation rental platform • villaroo.ir • Django

- Built the scalable Django backend powering a vacation rental marketplace for hosts and guests.
- Cut long-term maintenance cost with modular service boundaries and reusable business components.
- Improved release reliability by introducing automated integration tests and deployment pipelines.

Product Owner & Backend Engineer (own product, part-time) | RTLHTML

Nov 2024 – Present

One of Iran's largest HTML template marketplaces • rtlhtml.ir

- Grew the product from concept to one of Iran's largest HTML template marketplaces, owning backend and product end to end.
- Supported long-term growth with asynchronous processing pipelines and database performance optimization.
- Kept the platform stable and fast to ship through deployment automation and infrastructure improvements.

Backend Engineer | Melket (Poolina)

May 2024 – Sep 2024

Fractional real-estate investment platform enabling shared property ownership

- Built the backend that lets investors co-own real estate through digital asset allocation.
- Delivered financial operations, ownership allocation and transaction processing with strong consistency guarantees.
- Turned complex business requirements into maintainable, testable services with product stakeholders.

Backend Engineer | Marzban

Dec 2023 – Mar 2024

VPN subscription management platform

- Built backend services for a microservices-based VPN subscription platform serving 100K+ active users.
- Improved reliability and efficiency with secure, low-latency communication between distributed services.
- Contributed to backend architecture, deployment automation and production infrastructure.

Backend Engineer | Britty

Dec 2022 – Aug 2023

Comprehensive TOEFL practice platform

- Built a TOEFL practice platform end to end with DDD and Clean Architecture for maintainability and testability.
- Delivered scalable assessment workflows covering exam execution, scoring and analytical reporting.
- Kept the codebase easy to extend by applying Clean Architecture boundaries and modular design.

Freelance Python Developer | Independent 2020 – 2022

- Delivered Django/DRF APIs, Telegram bots (subscription sales, media management) and web scrapers for clients and own products.
- Built a strong foundation in REST API design, Redis caching and browser automation that later scaled into production fintech work.

OPEN SOURCE, PROJECTS & ACHIEVEMENTS

- **Quera Technology Olympiad 2024:** ranked 16th of 242 teams in the Python/Django track.
- **drf-turbo-uploader:** open-source Django REST Framework solution for fast, chunked, out-of-order large-file uploads from async clients.
- **MarzbanAPIClient:** open-source Python client exposing the full Marzban (Xray) VPN management API.
- **FileTalk:** FastAPI document chatbot answering questions over uploaded files (OpenAI, FAISS retrieval).
- **Python Descriptors guide:** published an in-depth open-source tutorial on Python descriptors; RTL HTML Starter, a free Bootstrap 5 RTL template.

SKILLS

Languages: Python, SQL
Backend Frameworks: FastAPI, Django, Django REST Framework (DRF), Flask, Pydantic
Databases & Storage: PostgreSQL (multi-database), Redis, MinIO
ORM & Data Access: SQLAlchemy 2.0 (async), Django ORM, Alembic
Architecture & Design: RESTful APIs, Microservices, Modular Monolith, DDD, Clean Architecture, SOLID, Design Patterns, Strangler Fig, Transactional Outbox, Idempotency, Distributed Locking
Asynchronous & Messaging: AsyncIO, Celery (workers + beat), Redis broker
Payments & Fintech: SEP, Jibit (payments + KYC), Paystar settlement, wallets and ledgers, digital-gold trading
Caching & Performance: Redis caching, query optimization, database indexing, performance tuning
Security: JWT (ES512), OAuth2, OTP / 2FA, RBAC, rate limiting, API security, OWASP
Testing: Pytest, unit testing, integration testing
DevOps & Observability: Docker, Docker Compose, Linux, Nginx, Git, CI/CD (GitLab CI), Prometheus, pre-commit
Tools: OpenAPI (Swagger), Postman, Playwright, GitHub, GitLab
Software Engineering: System design, Agile/Scrum, code review, refactoring, technical documentation, troubleshooting

EDUCATION

B.Sc., Payame Noor University (remote) In progress

LANGUAGES

English: professional working proficiency (C1 listening) | **Persian:** native

MILITARY SERVICE

Permanent exemption
