Mohammad Sadegh Majidi Kadkani

Senior Backend Engineer | Fintech

Mashhad & Tehran, Iran — open to Remote | +98 901 248 6495 | sadeghmajidi980@gmail.com | github.com/Cmatrix1

SUMMARY

Senior Python Backend Engineer with 6+ years of experience designing, building, and scaling secure, high-traffic backend systems using Python, FastAPI, Django, PostgreSQL, Redis, Celery, and Docker.
Experienced in fintech, SaaS, and marketplace platforms, including digital-gold trading systems serving 250K+ users, payment infrastructure, investment platforms, and large-scale subscription services.
Strong expertise in backend architecture, system design, Clean Architecture, domain-driven design (DDD), financial transaction integrity, legacy system modernization, zero-downtime migrations, and automated testing.
Proven ability to take ownership of complex backend systems, translate business requirements into reliable technical solutions, and deliver production-ready software. Hands-on experience building AI-powered products using LLMs and RAG.

EXPERIENCE

Senior Backend Engineer | Zarafza (Amin Etemad)
May 2026 – Present

Digital-gold trading fintech • zarafza.com • FastAPI, PostgreSQL, Redis, Celery

- **Led the V2 rewrite** of a live digital-gold trading backend serving 250K+ users, consolidating 3 legacy services into one modular FastAPI monolith (Strangler Fig) and retiring them endpoint by endpoint.
- **Delivered a zero-downtime migration** across 5 production PostgreSQL databases using schema ownership rules, outbox-backed dual-writes and a staged API-gateway cutover, with no service disruption for users.
- **Made payments money-safe:** every SEP/Jibit callback is re-verified before crediting, failed credits retry idempotently via a transactional outbox, and Redis distributed locks prevent double-spend in trades and withdrawals.
- **Raised security and reliability** with ES512 JWT, OTP/2FA on withdrawals, RBAC and rate limiting, plus Prometheus metrics, health checks and automatic alerts on server errors (Docker, GitLab CI, Celery).
- **Guaranteed legacy parity** with an automated integration testing framework of 300+ test cases, while shipping production features alongside frontend and product teams.

Backend Engineer (Contract, part-time) | Namagar
Apr 2026 – Jun 2026

AI-powered investment portfolio platform for gold, forex, crypto, stocks and funds

- Built the platform's backend from scratch, enabling investors to track and analyze gold, forex, crypto, stock and fund portfolios in one place.
- Delivered portfolio valuation, ROI and profit/loss analysis, historical performance and scenario simulation as a production-ready financial analytics product.
- Improved responsiveness and scalability through background task orchestration and caching.

Backend Engineer | Villaroo
Dec 2025 – Apr 2026

Modern vacation rental platform • villaroo.ir • Django

- Built the scalable Django backend powering a vacation rental marketplace for hosts and guests.
- Cut long-term maintenance cost with modular service boundaries and reusable business components.
- Improved release reliability by introducing automated integration tests and deployment pipelines.

AI Backend Engineer | Bazgo
Oct 2025 – Dec 2025

AI content studio turning social videos into ready-to-publish, localized posts • Django, DRF, Celery, Gemini, FFmpeg

- **Built** an end-to-end AI content pipeline: Google Custom Search discovery filtered by platform, background video ingestion from Instagram, YouTube and LinkedIn (yt-dlp), exposed via 20+ Swagger-documented REST endpoints.
- **Used** Gemini 2.5 Flash to auto-generate and translate SRT subtitles straight from video, then burned subtitles and brand watermarks into the footage with FFmpeg as tracked Celery jobs.
- **Shipped** an LLM copywriting engine with structured JSON output that drafts captions from the transcript, with per-section regenerate/edit before publishing.

AI Backend Engineer | Daneshyar
May 2025 – Oct 2025

Document AI SaaS: RAG chatbots over business documents on Telegram, Bale and Instagram • FastAPI, OpenAI, FAISS

- **Multi-tenant RAG architecture:** a multi-tenant RAG platform with per-tenant FAISS indexes, language-aware chunking and OpenAI embeddings over PDF/DOCX/TXT, delivering context-aware answers with embedding caching and per-customer AI cost tracking.
- **Async orchestration & isolated subprocesses:** built an async orchestrator that launches, resumes and monitors each customer's Telegram/Bale bot as an isolated subprocess, enabling one-click deployment with fault isolation between tenants.
- **SaaS architecture & payment infrastructure:** designed the SaaS core on async FastAPI + SQLAlchemy 2.0 (30+ endpoints, 20+ Alembic migrations): OTP/JWT auth, subscription plans, coupons and ZarinPal payment integration, with an admin back office and Prometheus metrics.

Product Owner & Backend Engineer (own product, part-time) | RTLHTML Nov 2024 – Present

Independent HTML template marketplace with 1,600+ products • rtlhtml.ir

- Built and grew an independent HTML template marketplace to 1,600+ products, owning product strategy, backend development and operations end to end.
- Supported long-term growth with asynchronous processing pipelines and database performance optimization.
- Kept the platform stable and fast to ship through deployment automation and infrastructure improvements.

Backend Engineer | Melket (Poolina) May 2024 – Sep 2024

Fractional real-estate investment platform enabling shared property ownership

- Built the backend that lets investors co-own real estate through digital asset allocation.
- Delivered financial operations, ownership allocation and transaction processing with strong consistency guarantees.
- Turned complex business requirements into maintainable, testable services with product stakeholders.

Backend Engineer | Marzban Dec 2023 – Mar 2024

VPN subscription management platform

- Built backend services for a microservices-based VPN subscription platform serving 100K+ active users.
- Improved reliability and efficiency with secure, low-latency communication between distributed services.
- Contributed to backend architecture, deployment automation and production infrastructure.

Backend Engineer | Britty Dec 2022 – Aug 2023

Comprehensive TOEFL practice platform

- Built a TOEFL practice platform end to end with DDD and Clean Architecture for maintainability and testability.
- Delivered scalable assessment workflows covering exam execution, scoring and analytical reporting.
- Kept the codebase easy to extend by applying Clean Architecture boundaries and modular design.

Freelance Python Developer | Independent 2020 – 2022

- Delivered Django/DRF APIs, Telegram bots (subscription sales, media management) and web scrapers for clients and own products.
- Built a strong foundation in REST API design, Redis caching and browser automation that later scaled into production fintech work.

OPEN SOURCE, PROJECTS & ACHIEVEMENTS

- **Quera Technology Olympiad 2024:** ranked 16th of 242 teams in the Python/Django track.
- **drf-turbo-uploader:** open-source DRF solution for fast, chunked, out-of-order large-file uploads. github.com/Cmatrix1/drf-turbo-uploader-project
- **MarzbanAPIClient:** Python client for the full Marzban (Xray) VPN API. github.com/Cmatrix1/MarzbanAPIClient
- **Python Descriptors:** in-depth open-source guide to Python descriptors. github.com/Cmatrix1/Python-Descriptors

SKILLS

Python (Expert): 6+ years of production Python: AsyncIO, type hints, Pydantic, Pytest; SQL

Frameworks & Data: FastAPI, Django, DRF, Flask, SQLAlchemy 2.0 (async), Alembic, PostgreSQL, Redis, MinIO

Architecture: Microservices, Modular Monolith, DDD, Clean Architecture, REST APIs, Transactional Outbox, Idempotency, Distributed Locking

Async & Messaging: Celery (workers + beat), Redis broker, Telegram/Bale bots (Pyrogram)

AI & LLM: OpenAI, Gemini, LangChain, RAG, embeddings, FAISS, structured LLM output

Fintech & Security: SEP, Jibit, Paystar, ZarinPal, wallets/ledgers; JWT (ES512), OAuth2, OTP/2FA, RBAC, rate limiting

DevOps & Testing: Docker, Linux, Nginx, GitLab CI/CD, Prometheus, unit & integration testing

Engineering: System design, code review, Agile/Scrum

EDUCATION

B.Sc. in Computer Engineering | Payame Noor University | In Progress

LANGUAGES

English: Listening C1 | Reading C1 | Speaking B2 | Writing B2

MILITARY SERVICE

Permanent exemption
